

Modul-gate control valve with hydraulic block

We are glad to inform you that our Modulgate series now includes also two new versions with additional pressure compensated hydraulic block. The main valve is air controlled with open centre layout to meet CE requirements, especially designed for heavy duty tippers, off-road tippers and semitrailers.

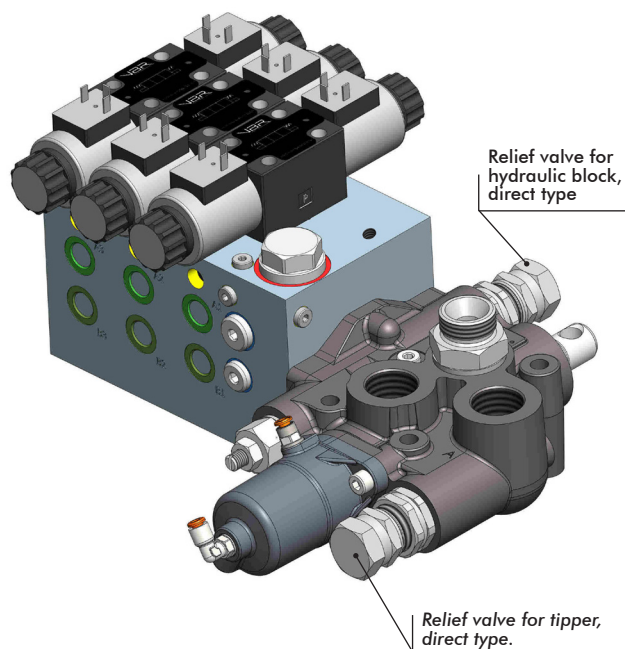

The use in combination with OMFB air controls enhances the proportional lowering features. The valve body is made of galvanized nodular cast iron, with nickel coated spool and it is ready to be coupled with a hydraulic block.

Thanks to the pressure compensation the hydraulic block allows single and multiple movements keeping the same speed of the same at different working pressure.

ORDER CODES

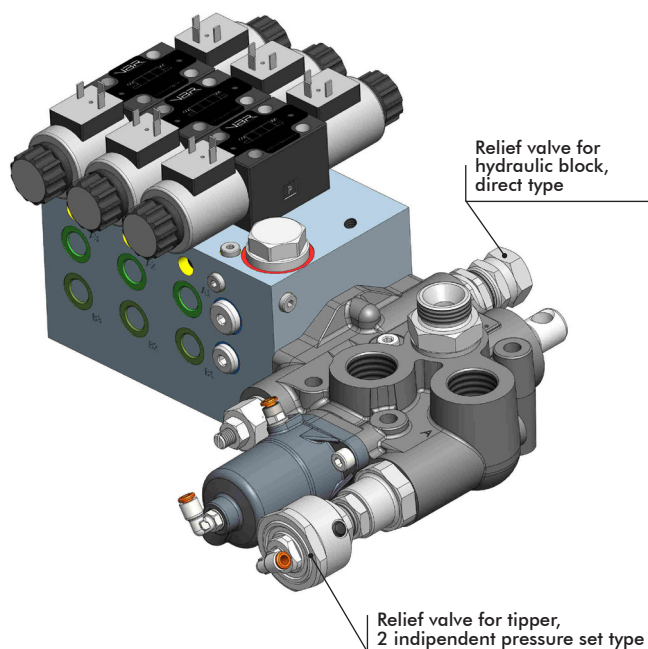

**Modul-gate with relief valve,
direct type**

12151600314

**Modul-gate with relief valve,
2 independent pressure set type**
