

New bracket kit for electro-magnetic clutch

Components of the Kit

Kit mounted on the vehicle

We have set up the new kit for mounting electro-magnetic clutch unit on Fiat Ducato, Citroen Jumper and Peugeot Boxer commercial vehicles equipped with 2800 JTD engine and air condition.

This assembly consists of a pulley and shaft that allow placing the electro-magnetic clutch into the opposite side of the air condition compressor.

It will be possible then to operate the hydraulic pump for small cranes, hydraulic winches, snow ploughs, salt-spreader and any other applications that require long working time that usually power units cannot handle.

Description and part number as follows:

"Bracket kit x Ducato 2800 TD-JTD+AC"
